

RDG

REMOTE DOOR GUNNER

Leveraging decades of experience in precision optical and spacecraft pointing systems, SDL developed the Remote Door Gunner (RDG) system, a M240/M134 door gunner station. RDG was designed for operation inside a UH-60 Black Hawk helicopter.

RDG gets the soldier out of the door, out from behind the gun, and out of the line of fire. A single crew member can control multiple weapon stations from the relative safety of the aircraft cabin. Precision, gyro-stabilized motion control greatly increases accuracy, leading to higher hit probability and more stowed kills.

RDG includes day/night optics, laser ranging, point-and-shoot ballistics, and battle networking mission recording capability — all operated from a user-friendly touch screen station.

RDG weapon assembly

FEATURES

- Real-time ballistics
- Battle networked
- Geo-aware
- Gyro-stabilized
- Touch screen/joystick control
- Seamless manual override
- HD day optics
- Cooled LWIR night optics
- Laser range finding
- Removable weapon for rapid egress
- Targeting modes:
 - Operator
 - Slew to cue
 - Cursor on target (COT)

AMRDEC is part of the U.S. Army Research, Development and Engineering Command, which has the mission to develop technology and engineering solutions for America's Soldiers. AMRDEC employs nearly 11,000 civilian scientists, researchers, and engineers.

RDECOM is a major subordinate command of the U.S. Army Materiel Command. AMC is the Army's premier provider of materiel readiness technology, acquisition support, materiel development, logistics power projection, and sustainment—to the total force, across the spectrum of joint military operations.
